

INDIVIDUAL PRIORITY LISTING

Based on the materials and information presented and discussed related to the 4 MAPP assessment and your own awareness of community health issues:

INDIVIDUALLY list 3 -5 health outcomes or broad health equity issues that are affecting the health of residents and communities in suburban Cook County.

Consider the following:

What is the extent of the impact of the issue?

How much of a burden is placed on the community, in terms of disease, disparity, years of potential life lost, potential worsening of the problem, financial or other social impacts?

What benefits would accrue from correcting the problem?

Would other problems be reduced in magnitude if the problem were corrected?

Can the problem be addressed with existing technology, knowledge, and resources? How resource-intensive are the interventions?
