# HIGHLIGHTS

## MEDICAL

- The emphasis in the Medical Division during 1969 was on new vaccines available. Use of both mumps vaccine and rubella vaccine was begun in our clinics, and a series of special 'rubella days' was held to administer this new vaccine against German measles.

## PUBLIC HEALTH NURSING

- The Division of Nursing of the Cook County Department of Public Health has received full accreditation as a community nursing service under the Joint Review Board for Community Nursing Service (The National League for Nursing and the American Public Health Association) in October 1969.
- Bedside care service under the Medicare Program has had a patient case load increase by approximately 15 per cent.
- Cooperating efforts with Title VI Project Education through three regional offices in case finding of pre-school age children for hearing, vision and multiple handicapping conditions.
- Participating cooperatively with OEO and USDA in getting families under the Supplementary food program for selected individuals.
- Planning, training and participating cooperatively with OEO and Planned Parenthood Association in getting selected individuals referred and under care for family planning services.
- Nursing service in a newly established hospital based maternal clinic for referral, clinic and follow-up service for selected pregnant women.

## Program Planning

- Hospital-to-home-care referral program in one general hospital
  - Foster home care of discharged patients from Oak Forest Hospital
  - Coordinated home care for north suburban Cook County
  - Family Planning Program
  - Hospital-to-home-care follow-up with a psychiatric hospital.
- Addition of a second physical therapist on a part-time basis for the North District area.
  - School health services have been increased by taking on three schools with an enrollment of 1,333.
  - Five rubella immunization days were planned through the district offices.
  - Child Health Conference program was extended to conduct 3 one-half day sessions added to the Phoenix conference, and one session added to the East Chicago Heights conference.
  - Vision-hearing screening programs in Headstart programs, Day Care centers and nursery schools during the summer.

## NUTRITION

- Nutrition integration in schools as pilot project in seven grade 4 classes in Turner, Childs, & Lincoln Memorial Schools, Posen-Robbins, School District 143½. A total of 200 school children and 12 teachers participated.
- Cooperative workshop planning with Metropolitan Chicago Nursing Home Association. A total of four workshops were planned, implemented and evaluated.

- Inter-agency planning in preparation for "Operation Nutrition." This program was designed to alleviate problems of hunger and malnutrition in vulnerable groups.

## DENTAL HEALTH

- Sponsored dental clinics in health centers, hospitals, and schools for children under 16 years of age whose parents cannot afford private dental care. A mobile dental unit served areas that lack convenient transportation facilities to the clinics.
- Dental surveys were conducted in the schools. They serve as a means of reexamining former patients as well as indentify children who are in need of services.
- Cooperating in a program of throat culturing to show the presence of streptococcus—the causative organism of rheumatic fever and rheumatic cardiac conditions. Early detection of these organisms can prevent this occurrence.

## SANITARY ENGINEERING

- Environmental health, air and water pollution, solid waste disposal—terms that have become popular in the last few years have been an important concern of this department for thirty years. These are factors that are woven in and out of the many other programs that we engage in to try to ensure a more healthful environment for the people of Cook County. Among these are public and private water supplies, public and private sewage disposal, restaurants, nuisance evaluations, Forest Preserve wells, motels and trailer parks, hospitals, swimming pools and solid waste disposal sites.

## PUBLIC HEALTH EDUCATION

- One of the significant activities carried on by the Division of Public Health Education during 1969 related to the critical problem of drug abuse, and culminated in the organization of the Cook County Coordinating Council on Drug Education. The Department was alerted to this problem because of panic and hysteria in many local communities in suburban Cook County.

Because of the conflicting data relative to the nature and extent of the drug abuse problem and what appeared to be a splintered approach, the health education staff of the Department conducted interviews with interested citizens, physicians, former drug addicts, and staff members of governmental and community agencies. It was obvious that very little was being done on a county-wide basis to implement a sound drug education program.

Many school administrators were being pressured into dealing with the problem by ill-timed, hasty, uncoordinated "crash programs."

The offices of the Health Department and the Superintendent of Schools jointly mobilized medical, educational, legal and other

health resources to meet to explore ways to initiate a comprehensive, well coordinated county-wide approach to the total problem of drug abuse. As an outgrowth of this meeting the Cook County Coordinating Council on Drug Education was organized.

The detail work involved in structuring this organization was assumed by the health education staff of the Health Department.

On October 16, 1969, a one-day drug education conference for school administrators was held. This conference was video-taped by the Chicago Board of Education and the tapes are available to local school districts to further drug education programs.

A two-day conference is being planned for February, 1970, to help teachers to deal with some of the critical issues related to drug abuse education. The focus of this program will be to provide accurate, up-to-date information which will help teachers to understand and cope with student drug use, as well as to help students make rational and sound decisions about drugs.

A DRUG ABUSE EDUCATION RESOURCE MATERIALS GUIDE has been prepared by the health education staff. Community and school groups are given assistance in planning local drug education programs.

## WE WORK FOR THE HEALTH DEPARTMENT

We are physicians, dentists, public health nurses, engineers, sanitarians, physical therapists, nutritionists, public health educators, hearing and vision screening technicians, and clerical personnel. Our goal is to use our special knowledge and training to provide better health for you. Much of what we do as a Health Department is in the area of preventive work. This report shows you some of the ways in which we strive to prevent disease, prolong life and protect your health.

# WE WORK FOR THE HEALTH DEPARTMENT

## I AM A PUBLIC HEALTH NURSE.

I am concerned for the health of people and work with individuals and families.

### I work with physicians:

- to give nursing care to persons confined to the home.
- to help people that have long-term chronic illness by teaching members of the family to care for these patients in the home. Conditions include CVA (stroke), multiple sclerosis, cerebral palsy, mental retardation, cancer, heart disease, and other diseases.

### I work with families:

- to teach expectant mothers to have a healthy pregnancy, plan for delivery and prepare for the arrival of the new baby.
- to teach new mothers to care for their infants, demonstrate formula preparation and bathing the baby.
- to give to tuberculosis patients an understanding of their disease, to teach them to prevent its spread, and to help them with their care.
- to help well individuals remain well and enjoy the benefits of good health by:
  - encouraging periodic physical examinations.
  - assisting with well-child conferences to teach and counsel families to maintain good health.
  - referring for medical examination, as early as possible, to identify and treat birth defects, cleft palate, orthopedic and other conditions.

### I work with other professionals:

- to plan, to coordinate, and to study health services necessary to the community.

# WE WORK FOR THE HEALTH DEPARTMENT

## I AM A PUBLIC HEALTH PHYSICIAN.

The community is my patient.

- I coordinate the activities of the health department staff. Together we plan programs to maintain and improve the total health of our community.
- Comprehensive health planning involves many agencies such as hospitals, nursing homes, charitable agencies and various levels of government. The most efficient use of health funds and facilities is our goal.
- Communicable diseases remain an important part of my work. Advice about the prevention, the diagnosis and the treatment of these diseases is given to physicians and to the public.
- Protecting the health of mothers and children is another major task. I help by promoting education, giving consultation and advice, and sometimes by direct clinic services.

## WE WORK FOR THE HEALTH DEPARTMENT

### I AM A PUBLIC HEALTH DENTIST.

As a specialist in community dental health, I work to improve the dental health condition of the whole community.

- Dental health education has a high priority in the program. I work with school administrators, nurses, community groups and professionals to create an awareness of dental health problems, and to provide necessary services.
- I work to promote the fluoridation of water. In areas where the water supply has not been fluoridated, patients are treated individually by applying the proper fluoride to their teeth. This treatment is highly effective in preventing and reducing the incidence of decay.
- I examine and treat children in need of dental care who are financially unable to secure these services, or who for other reasons would not get dental care. Patients requiring special treatments are referred.

## WE WORK FOR THE HEALTH DEPARTMENT

### I AM A VISION AND HEARING SCREENING TECHNICIAN

I work with the public health nurse to identify and prevent vision and hearing disabilities.

- I go to schools and nursery schools to test the vision and hearing of children.
- I refer children who fail the hearing test to the family physician, or an otologic clinic conducted by the department where a medical evaluation of the problem is made.
- Children failing the vision test are referred for early diagnosis and medical care.
- I bring vision and hearing problems to the attention of the public health nurse who makes the necessary plans for referral and follow up.
- In health education I help children to understand the value of their sight, to guard against eye accidents, and to practice good eye habits.

## WE WORK FOR THE HEALTH DEPARTMENT

### I AM A PHYSICAL THERAPIST.

I am primarily concerned that patients with weakening and crippling conditions are restored to their maximum potential for independence.

#### I work with physicians:

- By applying the techniques of physical therapy, I treat patients with disabilities resulting from disease or injury, under the physician's orders. These diseases and conditions include strokes, cerebral palsy, multiple sclerosis, amputations, fractures and others.

#### I work with patients:

- to help them develop strength, mobility and coordination of body.
- to teach them the proper use of prosthetic appliances, crutches, walkers, and wheelchairs.
- to help them accept physically impairing conditions which may be of long duration.

#### I work with families of patients:

- to assist them in helping the patient to recovery.

#### I work with public health nurses:

- to improve their skill in working with patients requiring physical therapy.

# WE WORK FOR THE HEALTH DEPARTMENT

## I AM A PUBLIC HEALTH NUTRITIONIST.

- I talk with mothers, family groups, school children and other people about foods that promote growth and health, and encourage people to eat these foods.
- I help people learn to use their food money more wisely. Some foods give greater dollar value than others. This is pointed out to families so that they can stretch their food dollar.
- For those people who have special needs for food, such as infants, people who are sick and older people, I help the family plan for the extra needs in such a way that the special diet fits into the family's food plan wherever it can.
- Another part of my work is helping institutions where older people live. We know that the older person needs to have food that is attractive, tasty and familiar. I help the administrator, the cook, and the nurse plan and serve food that will maintain health.

# WE WORK FOR THE HEALTH DEPARTMENT

## I AM A PUBLIC HEALTH EDUCATOR.

My special skills are in education, the group process, and methods and media of communication. I am a program planner as well as a community organizer.

- With other members of the public health team, I work to inform and influence the behavior of the public in matters pertaining to personal and community health.
- As a consultant to school administrators and teachers, I work to enrich the health curriculum.
- I participate with providers and consumers of health services in developing an understanding of health problems and methods of solution.
- A library of health pamphlets and educational materials is maintained to support programs of health education.
- Coordinating the public relations activities of the health department is a responsibility of the public health educator.
- Selected timely information on health problems, hazards, issues and conditions are disseminated and interpreted to the public.

# WE WORK FOR THE HEALTH DEPARTMENT

## I AM A PUBLIC HEALTH ENGINEER.

I work to make the community a safe place in which to live by coordinating programs that relate to environmental health such as:

- public water supply systems
- institutions—hospitals, nursing homes
- solid waste disposal
- public and private sewage disposal
- public and private swimming pools
- food service establishment sanitation
- nuisance control
- recreational areas
- tourist and trailer parks

I work with agencies—Federal, County, and State—to coordinate activities in these programs:

- approve plans for licensure or permits
- approve water supply and sewage disposal for proposed subdivisions
- inspect the more complicated installations
- air pollution

I work with other members of the department to:

- supervise and direct the activities of sanitarians.
- conduct in-service training programs.

I consult with public officials and engineers to:

- offer advice concerning installations affecting the environment.
- coordinate similar programs.
- help train local sanitarians.
- act as a resource.

I give talks and lectures to lay and professional groups.

# WE WORK FOR THE HEALTH DEPARTMENT

## I AM A PUBLIC HEALTH SANITARIAN.

I work under the supervision of the public health engineer and help carry out the objectives of the environmental health program.

I inspect for a license:

- tourist and trailer parks
- public swimming pools
- food service establishments
- nursing homes

I assist the engineer in his surveys of:

- solid waste disposal sites
- recreational areas
- proposed subdivision areas
- stream pollution

I inspect and investigate:

- nuisance complaints of all kinds
- migrant and substandard housing
- private sewage disposal systems
- private water supplies

I attend inservice training classes to learn more about my position and the services of the health department in order to be better prepared to answer questions from the public.

## WE WORK FOR THE HEALTH DEPARTMENT

### I AM A VD INVESTIGATOR.

I work to control and eradicate venereal disease by:

- screening all reports of blood tests received from private and public laboratories which may indicate the presence of VD.
- maintaining a register of all cases of venereal disease, showing the current status of the patient and the extent and nature of the treatment.
- conducting a confidential interview of each infected person (confirmed by laboratory examination) in an effort to identify all persons involved with the infections, and to motivate them to be placed under medical care and treatment.
- serving as a consultant to physicians and the public regarding venereal disease information.

## WE WORK FOR THE HEALTH DEPARTMENT

### I AM A CLERICAL WORKER.

I am involved in some aspects of all health programs under the supervision of the professional staff of the department.

- I keep daily records of communicable diseases reported to the department, as well as maintaining the VD and TB registries, where the status of each patient is kept current.
- I distribute biologicals used for immunization to practicing physicians who request them.
- I record and file all births, deaths and other vital statistics. Certified copies of birth and death certificates are made on request.
- I serve as a deputy registrar in the Vital Statistics program.
- I make copies of all vital records for the health department files as well as for the County Clerk.
- I accept reports on all animal bites for the necessary follow-up.
- I check for all necessary information in order that appropriate follow-up can be done on cases of accidental poisoning.
- I keep records of patient billings and bookkeeping of monies received for home nursing service.
- I handle the procedures for validating international certificates of vaccination necessary for foreign travel.
- I provide supporting services for all communications and carry out the typing, filing and regular secretarial procedures that are a vital part of the day-to-day activities of the department.

## COOK COUNTY DEPARTMENT OF PUBLIC HEALTH

When the Cook County Department of Public Health was established on July 1, 1940, there were 400,000 people living within its boundaries. Today, by the latest count, there are more than 1,730,000 people residing in the 724 square mile health jurisdiction.

Appropriations for conducting the work of the department come from the general corporate fund of Cook County, and a grant-in-aid from the Illinois Department of Public Health. About two-thirds of the money is funded by Cook County and one-third comes from the State of Illinois. The 1969 budget totalled \$1,086,581.

The department is composed of eight major divisions. Each is headed by a chief who is responsible to the director. As a group, the chiefs form a professional team to assist the director in planning health services, determining health needs and establishing broad program policies. Field services are provided through four district offices strategically located in the suburbs. The central office is located in Chicago.

# PERSONNEL

## ADMINISTRATION

Director ..... John B. Hall, M.D., M.P.H.  
Business Manager ..... Leo V. Hennessy\*\*\*  
Business Manager ..... Joseph E. Duffy  
Administrative Assistant ..... Jessie Pierson

## PREVENTIVE MEDICINE AND EPIDEMIOLOGY

Chief ..... Colette Rasmussen, M.D., M.P.H.

## MATERNAL AND CHILD HEALTH

Chief ..... Maia H. Flom, M.D., M.P.H.

## PUBLIC HEALTH NURSING

Chief ..... Elaine Nemoto, R.N., M.A.

### Assistant Chiefs

Maria Coburn, R.N., M.A., Helen Nystrom, R.N., M.A.\*
