DEPARTMENT OF PUBLIC HEALTH

## A Dedication To *Elaine Nemoto*

Ms. Nemoto began her employment with the Cook County Department of Public Health in 1956 as a staff nurse. She continued her education and obtained a Master's Degree from the University of Chicago in 1959 with a major in public health nursing supervision. She returned to CCDPH and was promoted to Assistant Nursing Supervisor and then Nursing Supervisor of the agency's West District Office. In 1960 she was promoted to Assistant Director of Nursing and in 1966 she became Nursing Director.

Ms. Nemoto was an energetic supporter of nursing, especially in the field of community nursing. Under her direction the agency's nursing staff grew to meet the increasing demand for community nursing service.

With the introduction of Medicare in 1966, Ms. Nemoto spearheaded the development of home health nursing service within the structure of the Cook County Department of Public Health. The agency became certified as a Medicare Home Health Care Provider at a time when there were virtually no home health care services in suburban Cook County.

Ms. Nemoto initiated and obtained national accreditation of the nursing division with the National League for Nursing in 1969. CCDPH was among the three agencies certified in the State of Illinois. The division has been re-certified every five (5) years since 1969.

Ms. Nemoto was a fierce fighter for patient rights and a champion for the role of nursing in the field of public health.

For your 31 years of dedication — we thank you, Elaine Nemoto. You will be missed.

# A Word From *the Director*

In 1985, CCDPH continued its mission of promoting health and preventing disease. By increasing computerized data capabilities, we have been able to identify and localize health problems in our large and diverse area of jurisdiction.

Using the data and a system of management by objective, we have developed many district Public Health programs. This technique allows a continuous evaluation of our progress.

CCDPH has been successful in maintaining State and Federal grant funds to supplement local County tax dollars for preventive health services for the residents of suburban Cook County.

A brief report such as this cannot completely describe all of the Department's activities and functions, nor can it adequately acknowledge all the people upon whom we rely for continued delivery of the services. I wish to express my special thanks to George W. Dunne, President of the Cook County Board of Commissioners, and the entire Board for their support, and to the many volunteers and community groups for their generous contributions of time and resources.

This year we saw the retirement of Elaine Nemoto, Director of Nursing for CCDPH. We would like to dedicate our 1985 Annual Report to Elaine for her 31 years of service and contributions to the field of Public Health.

After reading this report, please feel free to contact us for additional information and clarification.

*Karen L. Scott, M.D., M.P.H.*

# Communicable Disease

## Control

The Division maintains surveillance on reportable communicable diseases and conducts epidemiologic studies and other activities necessary to prevent and control disease outbreaks.

- Routine immunizations are provided to persons of all ages.
- Free vaccine is made available to local community-sponsored clinics.
- The Division disseminates information on immunizations required for foreign travel and validates immunization records needed for passports.
- Confidential clinics offer diagnosis and treatment for sexually transmitted diseases.
- Sexual partners of infected individuals are contacted and advised to obtain treatment.
- Consultation is provided to local physicians and medical personnel regarding infectious disease problems.

### FOCUS '85

- Milk contamination at a local dairy resulted in a large Salmonella outbreak affecting over 5,500 individuals in suburban Cook County. Personal counseling and follow-up were provided for each laboratory-confirmed case. Additional part-time staff were brought in to collect data and conduct communicable disease investigations necessary to prevent the spread of the disease to household contacts of infected persons. Three hundred day care and food handling workers were excluded from their jobs until they were no longer able to transmit the disease. Recommendations for control measures for schools, day care centers and other child care institutions were issued by the agency. Employees from all divisions worked over 4,000 hours in controlling this outbreak.
- Acquired Immune Deficiency Syndrome (AIDS), a public health problem only noted within the last few years, received significant attention by CCDPH. 38 confirmed cases of AIDS were reported through December 1985 in suburban Cook County. The Division developed policy recommendations for schools and interpreted this policy in a joint press conference in cooperation with the Cook County Superintendent of Schools. This was the first of such recommendations to be formulated in Illinois.
- Eight special influenza immunization clinics were conducted during October for suburban residents 60 years and above and for the chronically ill. Over 2,000 individuals were immunized.
- Due to a sharp reduction in the production of a vaccine against diphtheria, pertussis and tetanus ("DPT"), CCDPH was compelled to restrict its use to children who had not yet completed their initial series of DPT shots. By the end of the summer of 1985, the shortage had abated and boosters were once again made available.
- CCDPH notified suburban day care center administrators of a newly developed vaccine to protect children against *Haemophilus influenzae b* (HIB). Young children enrolled in pre-school programs are at higher risk of acquiring this infection. Plans are being made to provide HIB vaccine in agency clinics.

# Maternal and Child Health

The division of Maternal and Child Health offers a variety of clinics to ensure the health and well being of women and their children.

- Prenatal care and preparation for delivery are offered at maternal clinics.
- High-risk pregnant women are given close supervision in order to improve their chance of having a full-term, healthy baby.
- Well-child care, including immunizations, is available to children from birth through 5 years of age.
- Pregnancy testing, family planning information and birth control methods are offered at family planning clinics.

## FOCUS '85

- Ninety-five students, aged two to fifteen years, who needed a physical examination and immunizations for school admittance, were given complete exams at five special clinics held in September and October. Twenty-six students found to have some physical abnormality were referred for follow-up.
- An open house was held at CCDPH's North District Clinic Office in Mt. Prospect to inform school personnel of services available to teens. Over 65 people were in attendance.
- Social workers helped teen mothers with sexuality and parenting issues and ensured that they and their children obtained needed social and medical services. Working closely with schools and local social service agencies, they provided continued support and counseling for girls enrolled in school-based programs for pregnant teens in Proviso, Bloom, Thornton and Lyons townships. Social workers also made presentations to students, parents and school staff on psycho-social aspects of teen pregnancy.
- A new family planning clinic opened in Forest Park to meet the additional need for service in the western suburbs.

# Nursing *Division*

The personal health services of CCDPH are conducted through the activities of the Nursing Division.

- Over 80 public health nurses staff clinics, counsel and teach clinic patients and make home visits.
- Health needs of individuals and families are assessed and referrals are made to appropriate medical and social services.
- Division staff provide nursing consultation in the public schools, as well as direct nursing services in 130 parochial schools.

## FOCUS '85

- The Division's accreditation by the National League for Nursing was renewed for another 5 years. Accreditation is awarded after an extensive review of nursing service and the ability to meet program objectives, provide quality care, and plan for staff development based on service needs.
- Residents of nursing homes and other long-term care facilities received assistance through the Ombudsman Program. A nurse specialist responds to requests for information on selecting a nursing home, admission policies, costs and alternatives to institutional care.
- A mental health nurse consultant provided over 400 case consultations to CCDPH staff nurses. Over forty home visits were made to assist nursing staff in managing and referring cases of depression, domestic violence, child discipline and suicide prevention. The consultant provided staff in-service education on communication, domestic violence, drug use and abuse, depression, suicide and decision-making.
- The Division contracts with 15 infant day care centers to provide monthly consultation and to review immunization records and health records. Under Illinois law, these centers must engage the assistance of a registered nurse to help ensure the safety and well-being of their young charges.

# Environmental *Health*

Engineers and environmental health inspectors strive to prevent diseases spread by food, water, wastes, rodents and insects.

- Health standards are maintained through periodic inspections of restaurants, food stores, trailer parks, hotels, motels and swimming pools.
- New building plans for food service establishments, subdivisions, and well and septic systems are reviewed to ensure conformity to regulations.
- Nuisance complaints are investigated and action taken on potentially dangerous situations.
- For a small fee, the division examines water and sewage facilities in residences applying for FHA/VA financing.

## FOCUS '85

- Six communities signed contracts with CCDPH for restaurant and retail food establishment inspection services in those villages. Full reports are provided to village administrators. Plans for new and extensively remodeled food service facilities are reviewed for compliance with Federal, State, County and Village regulations.
- To increase the accuracy and efficiency in correcting problems and renewing operating licenses, CCDPH has computerized inspection reports of restaurants and retail food stores.
- The division participated in State-wide survey of selected playgrounds and park areas to determine levels of lead in the topsoil. Test results are being reviewed by specially trained environmental health workers.
- Over 1,100 nuisance complaints were investigated in 1985. The majority related to sewage or garbage disposal problems.
- Reports of food-borne illnesses traced to restaurants, food stores and caterers were investigated jointly with CCDPH's division of CDC.
- Cases were referred to the State's Attorney's Office for continual non-compliance with adequate environmental health practices.
- Hotels and motels in unincorporated Cook County were inspected for satisfactory heating plants, sewage and refuse disposal facilities, building and grounds safety and overall cleanliness. The two most common problems found were dirty linens and contaminated water. Corrections were made after the violations were pointed out to the owner or manager.
- Inspections of mobile home parks revealed improper refuse disposal and insufficient spacing between trailers. Other potential health threats came from malfunctioning sewage treatment facilities and contaminated well water in the trailer parks.
- Recommendations were made to seal 10 unused wells to prevent pollutants from entering the well. Contamination of the water supply can result in the spread of communicable diseases and other illnesses.

# Nutrition and WIC *Program*

Each month, approximately 5,300 individuals participated in the Federally funded WIC (Women, Infants and Children) Supplemental Nutrition Program. Persons served by this program include pregnant and breast-feeding women, infants and their children under the age of five years. Nutrition counseling is provided, as well as coupons for free cheese, milk, cereal, fruit juices, eggs and infant formula. Each child's growth is monitored. Mothers receive nutrition education to help them prepare balanced meals on a limited budget.

## FOCUS '85

- Special efforts were made to increase the number of teens enrolled in WIC. Teenagers who came to a clinic without an appointment were seen that same day.
- The average dollar value of coupons distributed was \$29 per client per month. Different coupon packages were distributed according to client need. The coupon pick-up rate stayed consistently high at 86%.
- A special three-week support group was conducted for breast-feeding women. Each hour-long session covered the pros and cons of breast-feeding, practical advice on how to breast-feed and information on nutritional supplements needed by infants receiving mother's milk. Plans for continuing and expanding this program are being reviewed for 1986.
- In response to increased demands for WIC services, the Harvey clinic was expanded from 4 to 5 days per month, and the Park Forest clinic from 3 to 4 days per month. Approximately 600 new clients are enrolled monthly.

# Refugee Health *Screening*

The division provides:

- Health screening for refugee families.
- Assistance in obtaining medical follow-up for identified health problems.
- Assistance to use available resources.
- Translation services enabling families to use health care systems more efficiently.

## FOCUS '85

- A clothing drive assisted over 600 immigrants from less developed countries to replenish an inadequate wardrobe. Held during the Fall and Winter months, the clothing provided emergency transitional wear for newly-arrived families.
- For six months a survey was conducted to derive the cigarette smoking habits and cancer awareness of 195 Lao male refugees. Statistical analysis found a consistent ratio of elevated habitual smoking patterns pre and post-resettlement. Over-all smoking rates for this group exceeded non-Indochinese U.S. inhabitants, and lack of knowledge of smoking dangers indicated health education needs.
- A seven county, multi-nationality hepatitis B screening and vaccination program was instituted. The program funded by the CDC in Atlanta, served over 6,000 people. Targeted were refugee women of child-bearing age and their household contacts.

# Chronic Disease *and Disability*

The division strives to reduce debilitating and premature death from chronic diseases. Its activities fall into three major categories:

- *Early Disease Detection:* High blood pressure screening; well adult medical check-ups.
- *Disease Prevention:* lifestyle assessment; health counseling; health promotion activities.
- *Disease Management:* classes for diabetics and hypertensives; high blood pressure follow-up.

## FOCUS '85

- High blood pressure screening was conducted on over 29,000 individuals at Health fairs, shopping malls, schools and other community sites. A computerized two-year monitoring program for persons with high blood pressure was offered to those with elevated readings.
- High blood pressure management classes were provided to patients in private physicians' offices and the work place. Two health educators presented the series of six hypertension control classes which covered diet, salt intake, weight reduction, stress, exercises and smoking cessation to 302 individuals. Staff worked closely with the physicians to improve their clients' adherence to the physician's recommendations for managing the condition.
- Complete physical examinations were provided to adults and high school students at Adult Health Clinics. The service includes a thorough physical examination, laboratory tests, blood pressure check, dental examination, vision and hearing screening, TB test, tetanus booster, nutrition counseling, health examination, Pap smear and breast exam. In addition to regularly scheduled clinics, many community groups invited CCDPH to use their facilities for "mobile" clinics. By offering the services to the public at familiar, convenient locations, CCDPH has almost doubled the number of people examined.
- Diabetes control classes were provided to patients of private physicians. A nurse/health educator worked closely with the physicians to educate their patients and to improve adherence to the doctor's recommendations for managing their condition. The five-week series included discussion of medications, diet and meal planning, monitoring blood sugar and preventing complications.
- Through a State-subsidized program, vision and hearing screening was offered to preschoolers enrolled in Headstart and other early learning programs, children attending special education classes and elementary school children in mandated grades. If any problems were noted, the child was referred to CCDPH otologic and/or ophthalmologic clinic for further testing. Five full-time technicians conducted 41,587 hearing screenings and 35,617 vision screenings.
- Throughout the month of July, vision and hearing tests were performed on over 200 children at Brookfield Zoo. Sixteen percent of those tested failed the hearing test and almost six percent failed the vision test; they were referred for further evaluation.
- The bid for the CCDPH custom designed mobile screening van was placed with the manufacturer in December of 1985. The van will be ready for use in Cook County Suburban area by the summer of 1986.

O R K

# Health Education *and Information*

Health educators help plan and publicize new services as well as increase community awareness and use of existing services. By assessing community health needs and exploring ways to meet them, the Division contributes to CCDPH's effectiveness. Staff works closely with other divisions to produce health education materials needed to support agency programs and represents the health department on State and Local councils. Staff provides information and consultation to health professionals in hospitals, schools and the community.

## FOCUS '85

- A comprehensive curriculum on sexuality was written for use in junior and senior high schools. Reproduction, pregnancy, contraception, sexually transmitted diseases (including AIDS) and decision-making are among the subjects covered. Each unit contains a content outline, teaching aids and classroom activities. The guide was distributed to 225 schools upon request.
- In late October, 80 health teachers and school nurses attended a workshop co-sponsored by CCDPH and the Cook County Superintendent of Schools. Speakers from local hospitals and universities discussed sexually transmitted diseases, contraception and decision-making. Health educators led small group discussions and presented the CCDPH curriculum guide along with other classroom activities.
- The division organized three half-day seminars that were held in November in cooperation with the Cook County Superintendent of Schools and the agency's division of Communicable Disease Control, to respond to school administrators' concerns about AIDS. Public health experts in the field of medicine, epidemiology and education presented recent research findings to the 425 educators in attendance.
- Twenty-four health fairs to provide information on health promotion, disease prevention and department services were held in various locations around suburban Cook County.
- A study of attitudes, beliefs and knowledge of dental care during pregnancy was conducted on 164 prenatal clinic clients during July. Data was analyzed and is being used to design educational programs.

# Dental *Health*

Preventative, diagnostic and restorative dental services are offered at clinics and in a variety of community settings. In 1985, emphasis was placed on increasing student participation in school-based cavity prevention programs. On-going educational efforts are made by dental staff to reduce tooth decay and other dental problems.

## FOCUS '85

- Grammar school children in 4 school districts participated in the CCDPH Pit and Fissure Sealant Program. A sealant is a thin acrylic material that is applied to molars. Of the students who received sealants, 95% retained them after 1 year.
- The joint Cook County Department of Public Health/Illinois Department of Public Health Fluoride Mouth Rinse Program reached 600 children in 4 school districts. Weekly rinsing with a fluoride-containing solution helps fight cavities by strengthening the tooth enamel. The program is recommended in areas where fluoride levels in the water supply are low and where children may not receive routine dental care.
- Through the use of mobile units, CCDPH dental staff was able to provide preventive and corrective services to 1,600 children enrolled in Headstart and 321 children enrolled in Summer Migrant Programs.
- A second mobile unit, owned by the Illinois Foundation for Dentistry for the Handicapped, made dental services accessible to over 400 senior citizens and disabled or handicapped persons.
- Dental education and screening were provided to women enrolled in CCDPH's prenatal clinics.

# Health Statistics *and Planning*

CCDPH serves as the official registrar of births and deaths for most of suburban Cook County. All births and infant deaths are reviewed for the presence of certain factors which may indicate special medical problems or social needs. When any of these factors are present, the certificate is referred to the appropriate district office for follow-up. Data from these documents are compiled and quarterly reports are written to assist in program planning. Statistical information from CCDPH is available to local governments, social service agencies, hospitals, and individuals upon request. Certified copies of birth and death certificates are provided to residents for a small fee.

## FOCUS '85

- Of the 27,000 births registered with CCDPH in 1985, 4,821 were identified as high-risk and referred to the Nursing Division. Among the factors considered to place a baby at risk for health problems were: low birth weight, mother under 20 years old, lack of prenatal care, no medical attendant at birth, and congenital anomalies.
- The time required to fill a request for copies of death certificates was reduced to 2 days in 1985. Copies of birth certificates can now be put in the mail within five working days or less.
- "STATS", semiannual newsletter for funeral directors, nursing homes and hospitals, communicates information and policy changes to those directly involved in filing birth and death certificates. Approximately 600 copies of each issue are distributed.
- Through a certificate exchange system, CCDPH receives copies of birth and death certificates on suburban Cook County residents that are filed in adjacent counties or the City of Chicago. This system has improved CCDPH's ability to collect accurate statistical data.
