A YEAR IN REVIEW

CCDPH
1987
ANNUAL
REPORT

COOK COUNTY DEPARTMENT OF PUBLIC HEALTH

A Word About CCDPH

The Cook County Department of Public Health (CCDPH) was established by the Board of Commissioners in 1945. As a state-recognized public health department, it strives to prevent illness and promote the health of suburban Cook County residents through a wide range of clinical, environmental and educational programs.

The Department is organized into four district offices, located in Skokie, Maywood, Oak Lawn and Markham, with an administrative office in Maywood. Many socio-economic, racial and cultural backgrounds are represented by the people living in the CCDPH service area.

Operations are funded through taxes from the Health Facilities Fund of Cook County, plus federal, state and local grants.

CCDPH is staffed by community health specialists: physicians, public health nurses, nurse practitioners, dentists, dental assistants, dental hygienists, engineers, sanitarians, nutritionists, public health educators, social workers, vision and hearing technicians, epidemiologists, health advocates, administrative and clerical staff.

This year, the CCDPH Annual Report is focused on the agency's most significant accomplishments in 1987. There are no highlights on specific divisions or people, because the success of all of our programs depends upon the cooperation and effort of all CCDPH staff.

If, after reading this report, you need more information, please call us. Δ

CCDPH Facilitates Primary Care

Uninsured, low income and in need of medical care...it's a familiar scenario in suburban Cook County. That's why the Cook County Department of Public Health began the Physician's Cooperative Service of Suburban Cook County (PCSSCC) and the Adult/Child Medical Clinic.

PCSSCC is a centralized referral program designed to provide individuals, who need diagnosis and treatment, with access to primary care physicians at reduced charges.

Residents of suburban Cook County, who meet financial qualifications and are not covered by Medicare or Medicaid, are eligible for the program.

An initial telephone screening of applicants is done by the CCDPH primary care coordinator. When accepted into the program, an identification card is issued to the patient. All referrals are made with consideration of the family's health needs, patient status and transportation resources.

In 1987, PCSSCC served clients in the northwest suburbs through more than 50 participating physicians. "We hope to expand our service throughout suburban Cook County in the future," said Jo Rose, PCSSCC Coordinator.

Later in 1987, primary care services did reach residents of west suburban Cook County.

A clinic was initiated by community church leaders who sought assistance from Loyola University Medical Center (LUMC) and the Cook County Department of Public Health (CCDPH) to provide medical care to the poor.

As a result of this grass-roots action, LUMC and CCDPH have joined forces to treat non-acute and chronic illness for both children and adults -- The Adult/Child Medical Clinic.

Several physicians from Loyola, pediatricians and internists and

public health nurses from CCDPH staff the clinics.

News of the clinic spread to other churches and community organizations quickly. Most of the clients seen at the Adult/Child Clinic were children and unemployed young adults with a wide variety of medical problems.

Through these two primary health care programs, CCDPH is reaching out to serve residents in suburban Cook County in this health need. Δ

In 1987, CCDPH saw a dramatic increase in activities dealing with the Acquired Immune Deficiency Syndrome (AIDS). A series of grants from the Illinois Department of Public Health totaled more than \$246,500 for AIDS-related ac-

tivities.

This allowed CCDPH to add eight full-time positions for dealing with this epidemic. AIDS activities centered around six areas: counselling and testing, epidemiologic investigations and surveil-

lance, high risk outreach, professional education, community education and school programs.

COUNSELLING AND TESTING

Counselling and antibody testing for the Human Immunodeficiency

CCDPH Expands AIDS Services

ciency Virus (HIV or AIDS virus) in suburban Cook County first began in 1986. In 1987, services were expanded to include four separate locations throughout the CCDPH service area. A total of 1,343 appointments were made with 912 persons receiving counselling and 886 receiving testing through these sites. A total of 20 persons (2%) were positive for antibody to the HIV, indicating that they had been infected with this virus in the past.

EPIDEMIOLOGIC INVESTIGATIONS AND SURVEILLANCE

A total of 68 cases of AIDS and 8 cases of AIDS Related Complex (ARC) were reported during 1987. This represents an increase of 120% over the 31 AIDS cases reported in 1986. A total of 122 cases have been reported since our first case in 1983. AIDS surveillance includes the routine tallying of cases by various demographic and transmission categories for the purpose of identifying patterns and changes in trends. Sixteen Persons With AIDS (PWAs) received a home visit by an epidemiologist and public health nurse. These visits are made with the consent of the PWA and his/her physician. The purpose is to verify probable route of infection, encourage notification of exposed persons, train household contacts in care and precautions, and assist in linking

the PWA with available resources.

HIGH RISK OUTREACH

High risk outreach efforts centered around gay/bisexual men and intravenous drug abusers. Advertisements for CCDPH counselling and testing services were placed in local gay newspapers and educational materials distributed in nine area bars and nightclubs catering to predominately gay clientele. Representatives from several suburban gay organizations were contacted and notified of our programs.

Training programs were held for staff in two suburban methadone treatment programs. Onsite counselling and testing was offered to clients of both programs. Subcontracts for counselling of high risk persons were offered to methadone programs, Cermak Jail, Cook County Hospital and a local clinic serving runaway youth.

PROFESSIONAL EDUCATION

Professional education efforts dealt mostly with informing and training area infection control practitioners on reporting requirements and in providing inservices to emergency medical and law enforcement personnel. Over 500 emergency and law enforcement personnel received information on AIDS, HIV infection and risk re-

duction in the course of 13 inservices. CCDPH staff provided AIDS training to more than 150 Sheriff's Officer Trainees.

COMMUNITY EDUCATION

Community education efforts were multifaceted and included the development of educational materials for potentially high risk persons seen at CCDPH sexually transmitted diseases, family planning, prenatal and adult health clinics. Other efforts included, presentations to local groups and the development of district networks of local agencies and organizations providing services to PWAs. Educational efforts targeting minority groups were initiated.

SCHOOL PROGRAM

In May of 1987, all suburban Cook County School principals and administrators were offered a package of materials to assist in preparing an AIDS education program for parents, teachers and students. The superintendents were also offered consultation on curriculum development and teacher training.

More than 350 packets were distributed and about 140 schools were provided education, consultation and training. Δ

Families With a Future (FWF), the state-funded program designed to reduce infant mortality, has completed its second year serving the communities of Chicago Heights, Ford Heights, Phoenix, Harvey, Robbins, Dixmoor, Maywood, and Bellwood.

The foundation of the FWF Program is the case management system. The case manager assures that pregnant women and infants and their mothers receive social, financial, and medical services. In 1987, over 1200 clients were case managed, new services were added, and existing services were expanded to further strengthen the program:

- Transportation was provided to sources of prenatal care, including high risk pregnancy services in Chicago.
- Homemaker services were provided to pregnant women whose physicians had prescribed complete bed rest and to women who needed help in adjusting to the needs of their high-risk infants.
- Payment for infant day care was provided for teen mothers completing their high school education and for working mothers.
- Several women were trained to become home day care providers.
- A standardized case management system was implemented and made available to all FWF participating agencies.

- The Mothers And Infants in Need (M.A.I.N.) Connection, the FWF information and referral line, experienced growth in client calls as a result of increased outreach activities such as the Community Baby Shower, the Beauty Parlor/ Barber Shop Contest, and the Neighborhood Canvass.

COMMUNITY BABY SHOWER

Imagine having a party for hundreds of pregnant women and their children. The Community Baby Shower was just such an event.

The Baby Shower addressed two key dilemmas involved in serving low-income pregnant women and their families. First, the shower helped women overcome barriers to service. Second, it motivated women to learn what services are available and to use them.

The shower's message to women was: "There are people and agencies available and eager to help you have a healthy baby." Over 379 adults and children attended the event and over 135 persons entered into the case management system.

SHEAR FUN

How do you reach the thousands of pregnant women who need social, financial, and medi-

Photo courtesy of Star Publications

Families With A Future

cal help?

The M.A.I.N. Connection sponsored a contest among hair salons and barber shops in the south suburbs. Stylists and barbers were asked to distribute M.A.I.N. Connection materials to their customers. The salon or shop that promoted the most calls to the M.A.I.N. Connection received a free advertisement in the newspaper of their choice.

NEIGHBORHOOD CANVASS

A series of door-to-door campaigns were organized to reach

people who may need services.

In the south suburbs, a special flyer was designed which simply instructed pregnant women without medical care to call "Candi" for help.

This approach has been very successful and has resulted in increased calls to the information and referral line. A similar flyer was designed for use in the Maywood area. Residents were instructed to call "Melody".

Families With a Future thanks

the following agencies which either implemented projects or provided services:

- Community Economic Development Association of Cook County, Inc.
- Family Care Services of Metropolitan Chicago
- Handicapped Transportation Services, Inc.
- Harvey Board of Health
- Human Action Community Organization
- Kindercare of Park Forest
- Oak Forest Hospital
- Super Care of River Grove
- Thornton Township High School District 205 Δ

One Hundred Year Flood Hits A Second Year

When 8.5 inches of rain fell in the Chicago area on August 13, 1987, it caused catastrophic flooding in the area adjacent to the Des Plaines River.

For the second time within two years, many suburban Cook County residents experienced what was described by the local media as "the 100 year flood".

Flooding is a natural disaster that greatly affects the health of the public. CCDPH provided information to flood victims regarding safety and health precautions to follow while cleaning up.

"Flood Facts", a flyer outlining

health and safety precautions, was made available to local municipalities and social service organizations in hard hit areas.

Residents who would be working in the flood water and hadn't had a current tetanus shot were advised to get one as soon as possible.

CCDPH provided free tetanus shots for these individuals through special clinics located close to flood areas and at regularly scheduled immunization clinics.

The department was involved in several media events. Channel

5 health reporter, Dr. Barry Kaufman, came to the CCDPH office to interview Dr. Ralph Cordell, Director of Communicable Diseases and Bob Wolischlager, Director of Environmental Health.

Channel 2 news reporter, Judy Moen, interviewed a CCDPH staff member at her flooded home in order to demonstrate safe clean-up techniques.

Information was provided to the local newspapers for printing and a number of radio stations ran features on safe clean-up procedures. Δ

Hepatitis A: Disease of the Year

The Cook County Department of Public Health investigated an outbreak of Hepatitis A in the south suburbs. Beginning in April and peaking in September of 1987, the epidemic most affected Calumet City. This community had no reports of Hepatitis A in 1985 or 1986, but did report close to 50 cases in 1987.

About half of the cases in Calumet City occurred within a three block radius. Disease spread

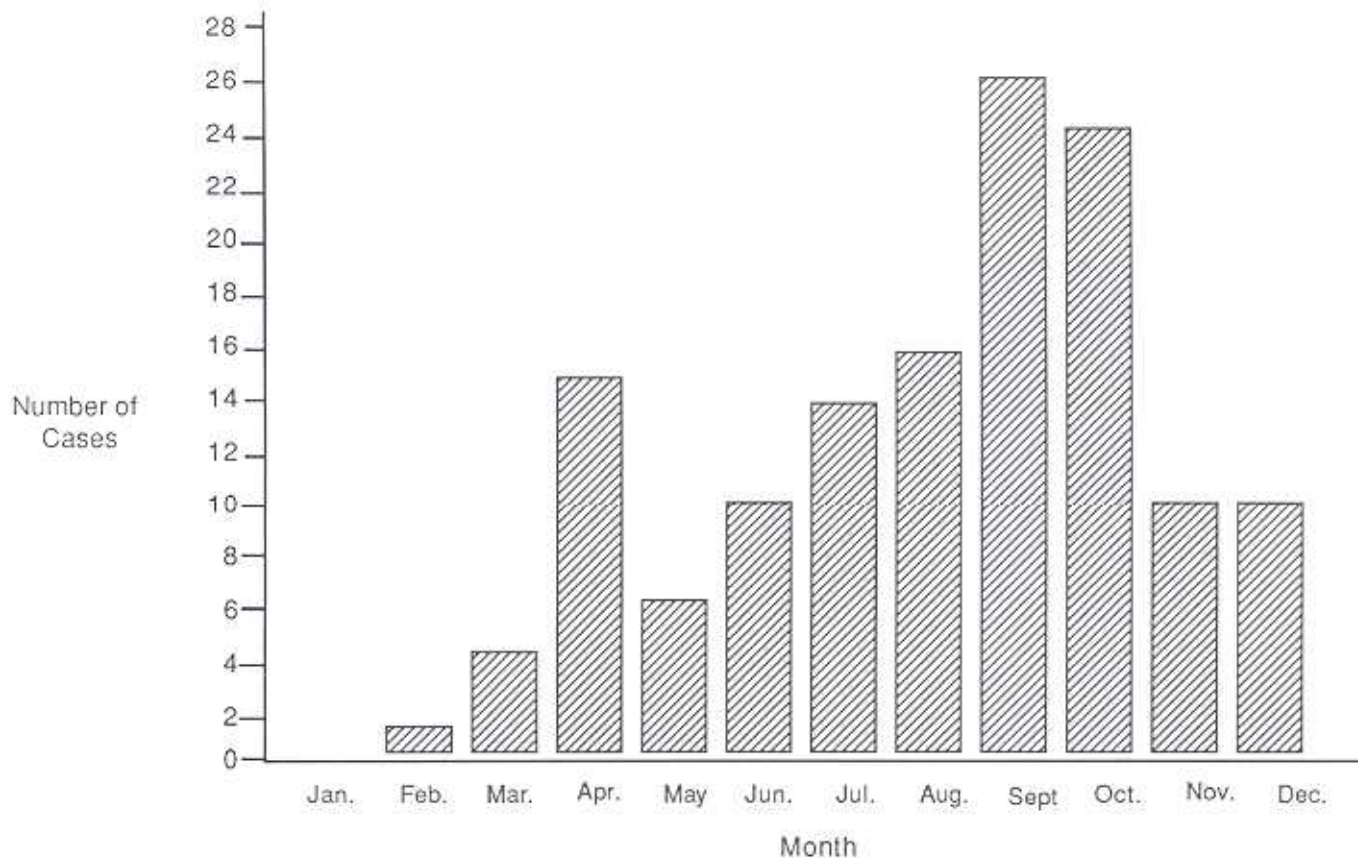

was attributed to transmission among neighborhood children. The Communicable Disease staff went door-to-door in this area passing out information on the disease and where to go for preventive treatment.

Arrangements were made with Calumet City health officials to provide free Immune Globulin for those exposed. The water in the area was tested and was found not to be contaminated.

Another feature of this outbreak was the fact that a number of cases reported in the summer months were in persons with a history of intravenous (I.V.) drug use. This was a commonality which appeared to link some of the scattered cases from various suburbs.

This community based outbreak subsided in December after a total of 138 cases of Hepatitis A were reported. Δ

Number of Hepatitis A Cases Reported to CCDPH - 1987
from South Suburban Cook County by Month

Immunizations For All Ages

One of the most important public health measures is to protect residents from vaccine preventable diseases. Through the CCDPH Immunization Clinics, people of all ages are offered such protection.

In 1987, special emphasis was given to immunizations for mumps, measles, influenza, and Haemophilus Influenza b (HIB).

MUMPS

An increase in the number of mumps cases in Illinois in 1986 lead to the creation of a state law mandating that all children be immunized against mumps by the fall of 1987.

This increased the demand for mumps vaccine in CCDPH clinics during the summer of 1987.

MEASLES

In 1987 sporadic cases of measles were reported among junior high and high school students. A major measles outbreak occurred at Ridgewood High School in Norridge where more than 20 cases were reported.

Because of the concern for unimmunized children and adults, a special immunization clinic was set up in the Norridge/Harwood Heights area.

INFLUENZA

For the fourth year, CCDPH offered influenza shots to suburban Cook County residents age 65 and older and to the chronically ill children age 12 and over.

This service has continued to expand each year. In 1987, vaccine was offered in 11 community sites throughout suburban Cook County.

HAEMOPHILUS INFLUENZA b

The most common cause of bacterial meningitis -- a serious disease affecting children under the age of five -- is an organism called Haemophilus Influenza b.

Children in a day care or group baby sitting setting are more likely to become infected by this disease because of their close contact with many other children.

The HIB vaccine was made available in the CCDPH Immunization Clinics to all children at high risk. Δ

CCDPH Joins In Amnesty Program

On July 1, 1987, the Cook County Department of Public Health's Refugee and Immigrant Services Program began conducting physical examinations in compliance with the Immigration Reform and Control Act (IRCA).

IRCA, passed in November of 1986, includes an amnesty program that would grant temporary resident status (with a green card valid for two years) to those persons who can

prove that they have been living in the United States since January 1, 1982 or before.

Having been identified as a Civil Surgeon by the Immigration and Naturalization Service, the CCDPH has the authority to examine persons who have been designated eligible for temporary resident status in the United States.

Physical exams are conducted at the CCDPH Refugee Clinics in

Maywood, Skokie and Elgin. The program covers an eight county area.

"Through our IRCA physical exam program, we hope to facilitate a comfortable and healthy transition for our new and welcome residents," said Barbra Levin, Director of Refugee and Immigrant Services.

A resource manual has been written to serve those seeking information on health and social services. Δ

Teens Look At Life Issues

The State of Illinois Parents Too Soon project awarded the Cook County Department of Public Health a grant to sponsor a Teen Leadership Conference in the southwest suburbs.

The conference was held in early February at Moraine Valley Community College in Palos Hills. Nearly 300 students from ten local high schools attended the all-day program on alcohol and substance abuse, suicide, teen sexuality and other pertinent health issues.

Some of the co-sponsors of the conference were: Christ Hospital Adolescent Clinic, South Suburban Youth Ser-

vices Alliance, the Cook County Sheriff's Youth Services Department, and the Southwest YMCA.

CCDPH participated in a second conference at the Hillside Holiday Inn in April. More than 250 students from junior high and high schools in the area attended.

The conference was the result of joint community action by the CCDPH, the Cook County Sheriff's Youth Services Department, Proviso-Leyden Council for Community Action and the Illinois State Career Guidance Center at Triton College.

Conferences for next year are being considered. Δ

Preventive Health Services Expanded for Children

HEALTHY KIDS PROGRAM

A grant was received from the Illinois Department of Public Aid to assist public aid recipients living in the Families With A Future target areas obtain preventive health services for their children. The targeted communities were Harvey, Robbins, Dixmoor, Phoenix, Chicago Heights, Ford Heights, Maywood and Bellwood.

The green card entitles children to regular medical check-ups and immunizations.

Many families do not understand that this service is available

to them and many health care providers do not encourage patients to take advantage of the services.

The program enables CCDPH to assist families in understanding the importance of preventive health services for their children and in finding a physician who will accept the medical card for well child care.

SCHOOL AGE CLINICS

In 1987, preventive health services were extended to school age children of medically indigent families.

CCDPH responded to the need for free or low cost required school health examinations by establishing regular school physical clinics.

The school age clinics are for children of elementary school age. Services are available for high school students through the adult health clinics.

To market the program, a special brochure entitled, "Information For Parents of School Age Children" was distributed to suburban Cook County Schools. Δ
