ACRONYMS, ABBREVIATIONS & DEFINITIONS**Active TB:** (see TB Disease)**AIDS:** Acquired immunodeficiency syndrome.**DOT:** Directly observed therapy. Healthcare personnel watch patients take their anti-tuberculosis medications to ensure adherence to therapy.**Extrapulmonary TB:** A person with *Mycobacterium tuberculosis* infection outside of the lungs, the pleural space, and the larynx (voice box). A person with extrapulmonary disease can also have pulmonary TB (see below).**HIV:** Human immunodeficiency virus, the virus that can lead to AIDS.**I-NEDSS:** I-NEDSS stands for Illinois-National Electronic Disease Surveillance System. I-NEDSS is a web-based application that establishes a secure and real-time communication link between hospitals, laboratories and other health care providers with state and local health department staff for the purposes of reporting and managing communicable disease information. All TB cases in suburban Cook County are reported to the Illinois Department of Public Health using I-NEDSS.**MDR-TB:** Multi-drug resistant TB. MDR-TB is defined as TB resistant to isoniazid and rifampin, the two most important first line anti-tuberculosis medications.**National Tuberculosis Indicators Project (NTIP):** monitoring system for tracking the progress of U.S. tuberculosis (TB) control programs toward achieving the national TB program objectives.**Pulmonary TB:** A person with *Mycobacterium tuberculosis* infection of the lungs, pleural space or the larynx (voice box). A person with pulmonary TB can also have extrapulmonary TB.**TB:** Tuberculosis**TB Disease:** A person with TB infection who is contagious to others; a person with TB disease can have pulmonary TB, extrapulmonary TB, or both.**XDR-TB:** Extensively drug resistant TB. XDR-TB is defined as MDR-TB plus TB that is resistant to any fluoroquinolone plus resistance to one of the three injectable drugs (i.e., amikacin, kanamycin, or capreomycin).

OVERVIEW

Epidemiologic Summary

- Eighty six (86) new cases of TB were reported in suburban Cook County in 2017. This represents a rate of 3.4 cases per 100,000, a 2.4% increase over cases reported in 2016 (Figure 1, Table 1).
- The North District had the highest TB rate (4.9 per 100,000) of the four public health districts in suburban Cook County (Table 8).

TB Burden in Foreign-born Persons

- The proportion of TB cases in foreign-born persons was 73% in 2017 (Figure 2).
- Three countries accounted for 63% of all foreign-born cases: Mexico (25%), India (22%), and the Philippines (16%; see Table 3).
- Among foreign-born persons diagnosed with TB, 76% arrived 5 or more years prior to receiving a diagnosis of TB disease (Figure 4).

Drug Resistance

- In 2017, no case of MDR-TB was identified (Table 5).

Coinfection with HIV

- Between 1-4 cases with TB were coinfected with HIV (Table 6); these persons are defined, per AIDS case definition, as having AIDS. The exact number of coinfected cases is not given in order to protect the confidentiality of those persons.

Directly Observed Therapy

- In 2017, 97% of patients with pulmonary TB received DOT (Figure 5).

Completion of Therapy

- For TB cases diagnosed in 2015, the most recent year for which complete data on completion of tuberculosis therapy are available, 100% of persons with TB disease who were eligible* completed treatment (Figure 6).

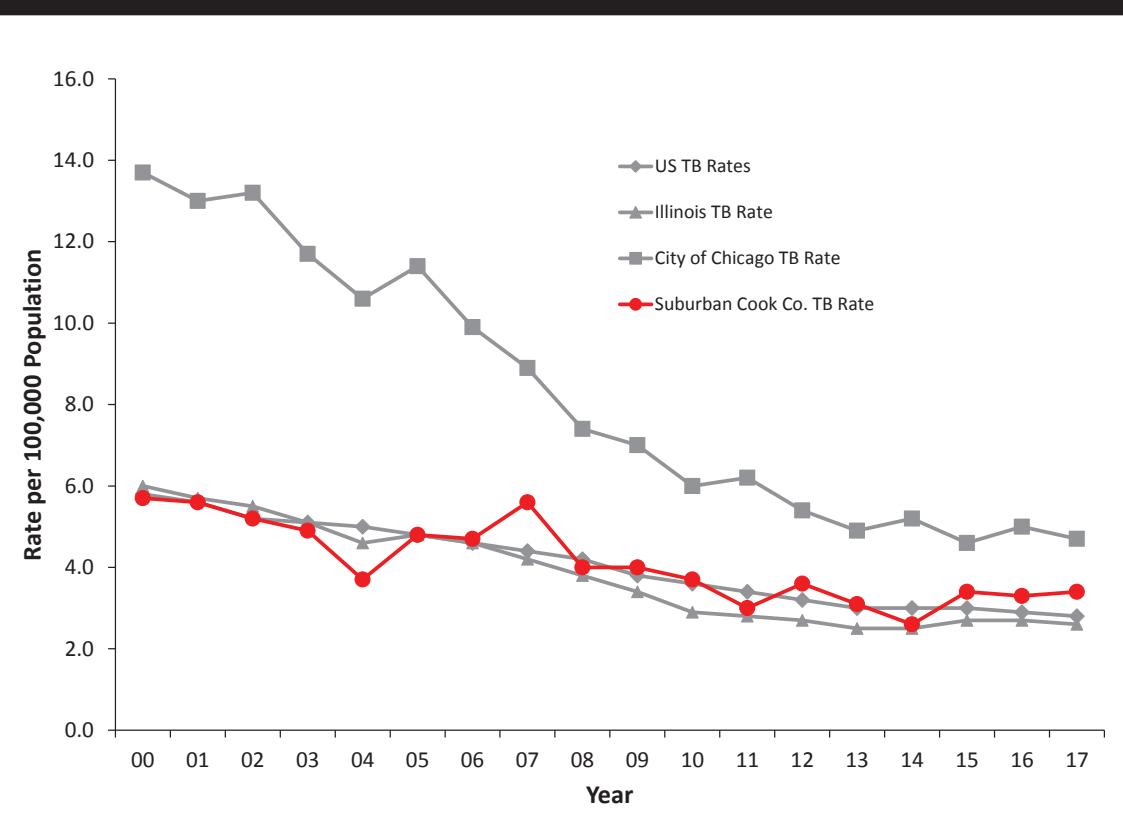

Among persons diagnosed in 2015 and who were eligible* to complete TB treatment in 12 months, 100% of cases did so. This is above the Healthy People 2020 goal of 93% and above the National Tuberculosis Indicators Project target of 95% (Figure 6).

Poverty and TB Rates

- There was no trend and only minor variations between TB rates and percentage of census tract residents living below the federal poverty level (Table 7).

* Eligible cases are persons who were alive at the time of TB diagnosis and did not die during therapy, and excludes persons with TB resistant to rifampin and pediatric cases (<15 years) with a diagnosis of meningeal, bone/joint, or miliary TB.

Figure 1. Rates of Reported Tuberculosis Cases by Selected Jurisdictions, 2000-2017

►Figure 1. In suburban Cook County, TB rates declined from 5.7 per 100,000 population in 2000 to 2.6 per 100,000 population in 2014, rising to 3.4 per 100,000 population in 2017. Declines in both numbers and rates of TB occurred nationally and in Illinois. TB rates in Chicago declined from 13.7 per 100,000 population in 2000 to 4.7 per 100,000 in 2017.

American Indian or Alaskan Native	0	(0)	1	(1)	0	(0)	0	(0)	0	(0)
Two or More Races	0	(0)	0	(0)	0	(0)	0	(0)	0	(0)
TOTAL	100	(100)	100	(100)	93	(100)	75	(100)	89	(100)

▲ **Table 2.** In 2017, 56% of TB cases were male; 81% were aged 25 years or older; 49% were Asian. There were 4 pediatric cases (<15 years of age) diagnosed in 2017 in suburban Cook County.

Figure 2. Proportion of Reported Tuberculosis Cases by Birthplace, Suburban Cook County, 2008-2017

◀ **Figure 2.** The proportion of TB cases in the foreign-born population in suburban Cook County in 2015 was 73%.

► **Figure 3.** Important race/ethnicity differences exist in the distribution of cases by birthplace. Among foreign-born persons, Asians accounted for the majority (62%) of cases. By comparison, in U.S.-born persons, no case was reported among Asians. Also, other groups that were reported were nearly equally distributed between non-Hispanic Blacks (40%), Hispanics (30%) and non-Hispanic Whites (30%).

Figure 3. Reported Tuberculosis Cases by Birthplace and Race/Ethnicity, Suburban Cook County, 2017

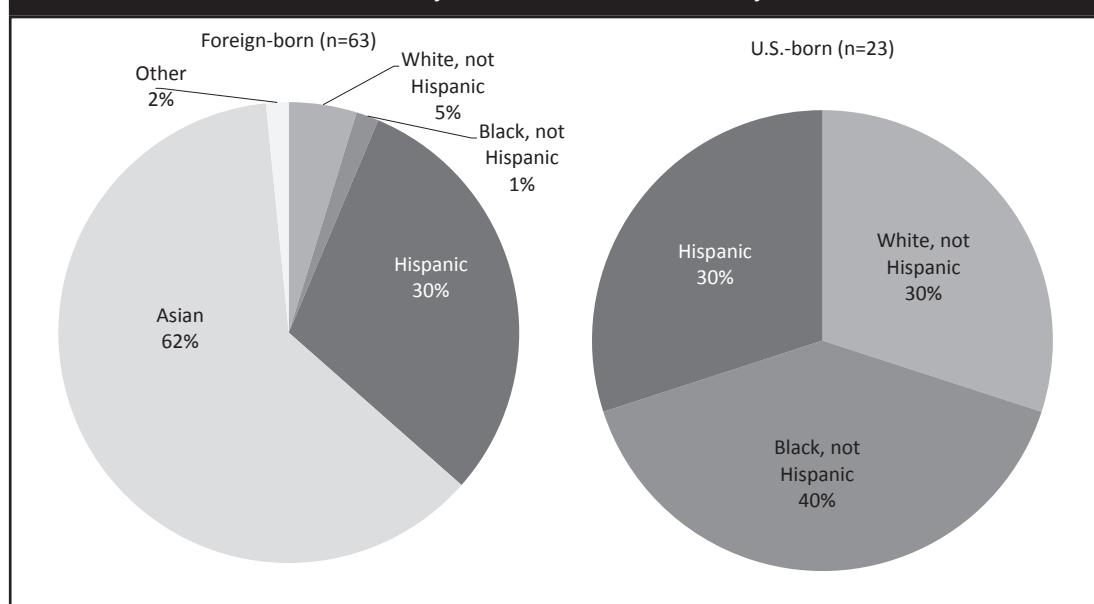

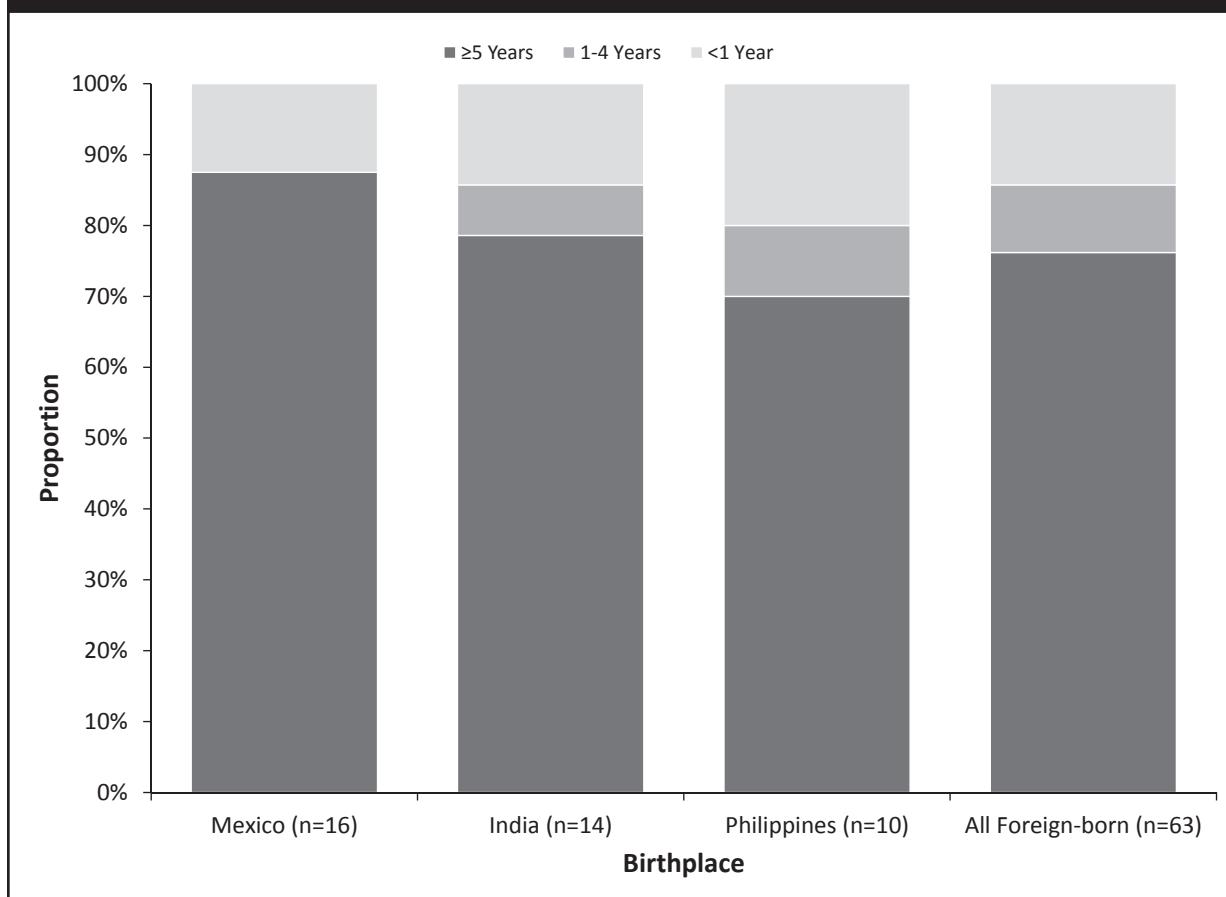

Table 3. Tuberculosis Cases by Most Frequently Reported Countries of Origin, Suburban Cook County, 2008 - 2017

Birthplace	Year									
	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017*
India	10	18	20	18	17	17	7	21	18	14
Mexico	11	17	21	17	10	11	16	14	17	16
Philippines	17	11	8	5	12	7	9	7	13	10
Korea [South]	1	2	2	1	0	1	1	1	1	4
Vietnam	2	6	1	2	1	1	0	3	3	3
Ukraine	0	0	0	0	0	3	1	1	0	2
Guatemala	0	0	0	0	0	0	2	0	0	2
Nigeria	1	1	0	3	0	2	1	2	3	2
Pakistan	1	3	0	0	2	2	0	2	2	2

* A single case of TB occurred in persons born in each of the following countries: China, Honduras Japan, Macedonia, Mongolia, Thailand, United Arab Emirates, and Yemen.

▲ **Table 3.** In 2017, 63 foreign-born persons with active TB came from 17 different countries. Three countries accounted for 63% of all foreign born cases: Mexico (n=16; 25%), India (n=14; 22%) and the Philippines (n=10; 16%).

Figure 4. Number of Years Living in the United States Prior to Receiving a Diagnosis of Tuberculosis Disease, Suburban Cook County, 2017

◀ **Figure 4.** Among all foreign-born TB cases reported in 2017, 76% arrived in the U.S. 5 or more years prior to receiving a diagnosis of TB disease.

Table 4. Number and Proportion of Reported Tuberculosis Cases by Site of Disease and Laboratory Results, Suburban Cook County, 2017

Site of Disease	Total Cases	Sputum Smear Positive		Sputum Culture Positive	
	No.	No.	(%)	No.	(%)
Pulmonary Only	59	20	(34)	31	(53)
Extrapulmonary Only	22	16	(0)	0	(0)
Both	5	1	(0)	3	(60)
Total	86	37	(43)	34	(40)

◀ **Table 4.** Sixty four (64) reported TB cases in 2017 had pulmonary TB; 22 cases had extrapulmonary only TB (no pulmonary involvement). Fifty three percent (53%) of pulmonary TB cases cases were culture positive.

Table 5. Tuberculosis Susceptibility Results by Birthplace, Suburban Cook County, 2017

Birthplace	Cases with Susceptibility Results	Any Drug Resistance	INH-Resistant		MDR-TB		
	No.		No.	(%)	No.	(%)	
Foreign-born	43	7	(16)	5	(12)	0	(0)
US-born	10	1	(10)	0	(0)	0	(0)
Total	53	7	(13)	5	(9)	0	(0)

► **Table 5.** Fifty three (53) cases in 2017 had susceptibility testing performed. There was no case of MDR-TB (nor XDR-TB) in suburban Cook County in 2017.

Table 6. Trends in the Number of Reported Tuberculosis Cases, HIV Testing and Coinfection with HIV, Suburban Cook County, 2008-2017

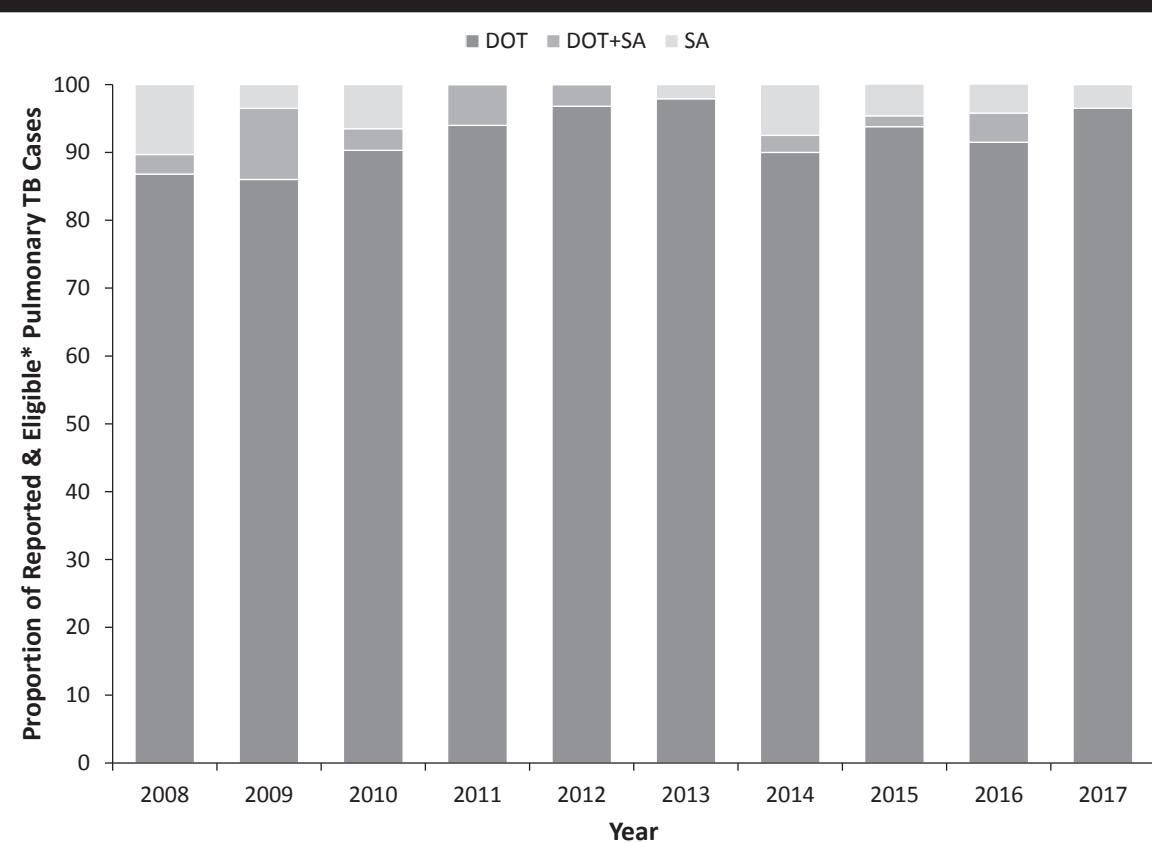

► **Table 6.** In 2017, 99% of reported TB cases had HIV results available or were tested for HIV. Between 1-4 cases were coinfect ed in 2017 (the exact number is suppressed to protect confidentiality). Persons with TB and HIV coinfection are classified, by AIDS surveillance case definition, as having AIDS.

Year	TB Cases		Tested for HIV		Coinfected with HIV*	
	No.		No.	(%)	No.	(%)
2008	100		87	(87)	9	(10)
2009	100		77	(77)	5	(6)
2010	93		72	(77)	0	(0)
2011	75		67	(89)	†	†
2012	89		78	(88)	5	(6)
2013	78		76	(88)	†	†
2014	64		64	(100)	5	(8)
2015	85		83	(98)	†	†
2016	83		82	(99)	†	†
2017	86		85	(99)	†	†

* Persons with HIV who receive a TB diagnosis are defined as having AIDS.

† Cells with small counts (1-4) have been suppressed.

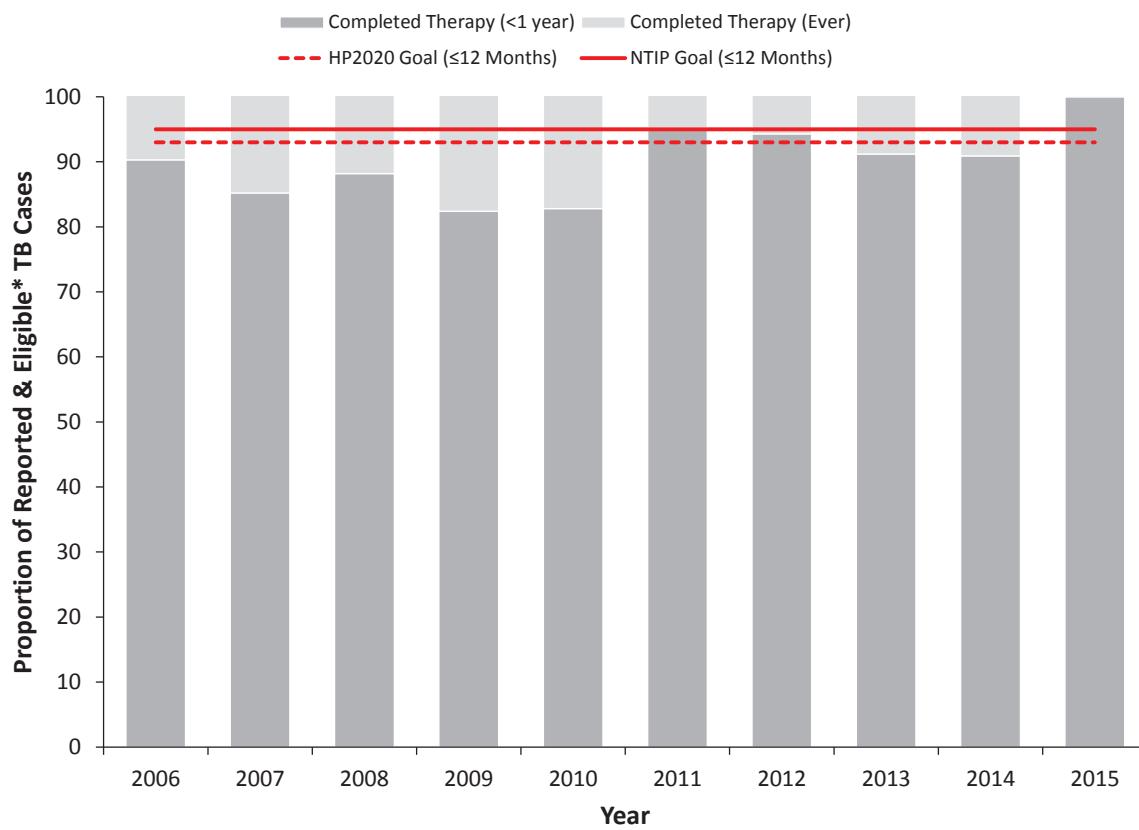

Figure 5. Mode of Treatment Administration in Reported Pulmonary Tuberculosis Cases, Suburban Cook County, 2008-2017

◀ **Figure 5.** In 2017, the proportion of TB cases receiving directly observed therapy (DOT), whether DOT only or DOT with some self-administered (SA) therapy was 97%.

* Percentage includes cases alive at diagnosis, who did not die during therapy, who did not move overseas, with one or more anti-tuberculosis drugs prescribed and excludes persons with missing or unknown information regarding mode of treatment administration.

Figure 6. Completion of Tuberculosis Therapy, Suburban Cook County, 2006-2015

* Eligible cases are persons who were alive at the time of TB diagnosis and did not die or move overseas during therapy, and excludes persons with TB resistant to rifampin and pediatric cases (<15 years) with a diagnosis of meningeal, bone/joint, or miliary TB.

◀ **Figure 6.** In 2015, the most recent year for which complete-data on completion of tuberculosis therapy are available, 100% of reported TB cases who were eligible* completed treatment.

In 2015, 100% of eligible* persons completed treatment in less than one year. This is above the Department of Health and Human Services Healthy People 2020 goal of 93% and the National Tuberculosis Indicators Project target of 95%.

Table 7. Tuberculosis Rates by Percent of Census Tract Residents Living Below Federal Poverty Level, Suburban Cook County, 2017

Percentage of Census Tract (CT) Residents Below Federal Poverty Level (Number of CTs)*	Number of TB Cases†	TB Rate per 100,000 Population¶
0-4.9% (8 CTs)	9	19.3
5-9.9% (22 CTs)	31	26.8
10-19.9% (25 CTs)	27	20.8
20-100% (12 CTs)	14	18.9

* Census tracts in which at least one case of TB lived.

† Census tract data missing for 5 cases.

¶ Denominators calculated from affected census tracts only.

▲ **Table 7.** In 2017, TB rates varied little by poverty level in suburban Cook County. For many other diseases, there is a clear “dose-response” relation whereby the greater the percentage of the population living below the federal poverty level, the greater the rate of the disease. However, that does not appear to be the case with TB in suburban Cook County in 2017.

Rates per 100,000 population per year. Rates calculated using 2010 Census data.
Use caution when interpreting rates where the count is < 20.

TECHNICAL NOTES

Surveillance Methodology

Healthcare providers and laboratories in suburban Cook County are required to report the following results within 24 hours: (1) sputum or tissue smears positive for acid-fast bacilli (AFBs); (2) cultures positive for *Mycobacterium tuberculosis*; (3) mycobacterial drug susceptibility results; (4) any other tests positive for *Mycobacterium tuberculosis*. In addition, confirmed TB cases must be reported to CCDPH within 7 days.

TB case reports are entered into I-NEDSS and provide the basis for the information presented in this report. This report includes all cases of tuberculosis reported during the year in which the case was confirmed. Confirmed TB cases who may have moved into suburban Cook County from another jurisdiction are not reflected in the data presented herein; such cases are counted in the jurisdiction that reported the case. Likewise, confirmed TB cases reported in suburban Cook County who may have moved out of suburban Cook County are included in the data presented herein.

Reported TB Case Rates

Suburban Cook County, Chicago and Illinois TB rates between 2000-2009 were calculated using 2000 census data. Suburban Cook County, Chicago and Illinois TB rates after 2009 were calculated using 2010 census data. National TB rates were calculated using national intercensal estimates.
