Protect yourself and others from COVID-19
TEST-TO-TREAT.

There are medications that can be given to people at high risk of severe illness, to help prevent hospitalization or even death. Treatment works best when given early.

If you test positive for COVID-19 and have one or more health conditions that increase your risk of becoming very sick, treatment may be available. Contact a health professional right away after a positive test to determine if you may be eligible, even if your symptoms are mild right now. Don't delay. Treatment must be started within the first few days to be effective.

If you don't have a healthcare provider, contact your health insurance company to find one. If you don't have health insurance, visit a federally qualified health center (FQHC) or free clinic.

A new nationwide Test-to-Treat program will soon give individuals a way to rapidly access free testing and treatment at hundreds of locations nationwide, including Cook County Health. For details, visit: aspr.hhs.gov/TestToTreat.

COVID-19 TREATMENT OPTIONS

MONOCLONAL ANTIBODIES	ORAL ANTIVIRALS	PRE-EXPOSURE PROPHYLAXIS
MONOCLONAL ANTIBODIES INFUSION THERAPIES	**ORAL ANTIVIRAL TREATMENTS**	**PRE-EXPOSURE TREATMENTS**
For treating COVID-19 to prevent hospitalization, reduce viral loads, and lessen symptom severity. These are antibodies similar to the ones your body would naturally make in response to infection.	For the treatment of mild-to-moderate COVID-19 in adults.	For those not infected with COVID-19, with moderate to severe immune compromise or for whom vaccination is not available due to a history of severe adverse reactions to vaccine components.
• Bebtelovimab • Remdesivir	• Molnupiravir • Paxlovid	• Evusheld
