Free, at-home chlamydia and gonorrhea testing

Cook County Department of Public Health is partnering with Color to offer free, at-home test kits for chlamydia and gonorrhea. Step-by-step instructions and a return box with a mailing label are included in your kit!

Here's what to expect:

-  **18+ and living in suburban Cook County?**
We'll ship you a test for free.
-  **Get your kit in the mail in a few days. It will come in a plain, unmarked envelope.**
-  **Create a Color account and securely fill out your information.**
-  **Collect your sample(s), following the kit instructions.**
-  **Package and drop the test at your nearest USPS drop box.**
A clinical lab will process the sample.
-  **Privately review your results in your Color account within a week after the lab receives your sample.**

If you test positive

You'll receive a call from a healthcare provider the day your results are released (or Monday, if on the weekend).

This will include:

- **Get treated.** Both you and your sexual partner(s) should talk to a healthcare provider about treatment. Antibiotics may be recommended and, in most cases, can effectively treat chlamydia and gonorrhea.
- **Tell your partner(s).** Let any sexual partners from the last three months know that you have tested positive. They may need to get tested and treated. Your partners may be eligible to get a prescription for treatment without a test. Ask your provider. Retest after three months to check for reinfection and continue practicing safer sex.
