Subject: Nationwide Bicillin Shortage

Due to increased demand, the FDA has listed penicillin G benzathine injectable suspension products (Bicillin L-A®) on their drug shortage webpage. The FDA website includes an expected duration for the shortage. CDC continues to monitor the situation and will post updates as needed. Below is a listing of the updated CDC recommendations on this shortage.

Bicillin L-A® is the first-line recommended treatment for syphilis and the only recommended treatment option for some patients. *Congenital syphilis is on the rise. Nationwide, congenital syphilis has risen 203% since 2017 and it is critically important that providers prioritize Bicillin L-A as listed below.*

During this time, programs should:

- Continue to follow CDC’s treatment recommendations. Penicillin G benzathine (Bicillin L-A®) is the only recommended treatment for pregnant people infected with or exposed to syphilis.
  - Doxycycline 100mg PO BID for two weeks (for early syphilis) or for four weeks (for late latent or syphilis of unknown duration) is an alternative for the treatment of non-pregnant people with a penicillin allergy.
- **Prioritize the use of Bicillin L-A® to treat pregnant people and babies with congenital syphilis.**
- To help CDC continue to monitor the situation, notify DSTDP (stdshortages@cdc.gov) of:
  - Shortages or stock-outs of Bicillin L-A® in the jurisdiction.
  - Situations in which patients diagnosed with syphilis are not being treated due to the inability to procure Bicillin L-A® in the jurisdiction.
- Report any shortages to the Pfizer Supply Continuity Team at 844-646-4398 (select 1 and then select 3).

Visit the [CDC site](https://www.cdc.gov) for more information regarding syphilis guidelines. For information on preventative measures via DoxyPEP visit [here](https://www.cdc.gov).
