

2020 Suburban Cook County Youth Risk Behavior Survey Report

Epidemiology Unit, 2022 Cook County Department of Public Health Forest Park, Illinois

ACKNOWLEDGEMENTS

Cook County Department of Public Health would like to acknowledge the following partners for their participation in this work:

- ICF Survey Research Services
- Cook County Department of Public Health Staff
- CSTE Fellows
- Suburban Cook County Partners
- Cook County Public Schools

The Cook County Department of Public Health envisions a healthy Cook County where all people and communities thrive in safe, health-promoting conditions.

INTRODUCTION

The 2020 Suburban Cook County Youth Risk Behavior Survey (SCC YRBS), conducted by ICF on behalf of the Cook County Department of Public Health (CCDPH), is a survey of students attending public schools in grades 9 through 12 that assesses priority health risk behaviors, including behaviors that result in unintentional injuries and violence; tobacco use; alcohol and other drug use; sexual behaviors that could contribute to sexually transmitted diseases, and unintended pregnancies; dietary behaviors and physical activity.

The Youth Risk Behavior Surveillance System (YRBSS), upon which the SCC YRBS was based, was designed in cooperation with federal agencies and numerous state and local departments of education and health and is conducted at the national, state, and local levels. Cook is the largest county in Illinois with over 5 million residents, half of which reside in the suburbs of Chicago. SCC YRBS results help describe the extent to which youth are engaging in risky behaviors in the 125 suburban municipalities that comprise CCDPH's jurisdiction. The last local YRBS conducted in Suburban Cook County occurred in 2010.

The SCC YRBS was originally intended to start and complete fielding during the spring 2020 semester. However, the unprecedented effects of the coronavirus (COVID-19) pandemic led to an abrupt and early end to spring fielding. A shift in methodology allowed data collection to resume and conclude in the fall of 2020. As a result, data was collected by two modes (paper questionnaire and web survey), in two settings (in-school proctored by trained field staff and via distance learning administered by teachers), and in two seasons across two academic years (spring 2020 and fall 2020).

A total of 1,310 surveys were collected from 1,448 students in randomly selected classes across 13 participating schools. The student response rate was 90.4% and the school response rate was 52.0%. The overall response rate (percentage of schools x percentage of students) was 47.0%.

METHODOLOGY

Sample selection

A representative sample of 25 schools, and a random selection of three to five classes (about 100 students) within those schools, was selected to participate. Invitation materials were sent to superintendents before approaching selected schools about their participation.

Survey administration

Once a school agreed, a survey coordinator worked with the school's point of contact to complete class selection and schedule a survey date. Parental opt-out forms were provided and distributed following established school protocols. In the spring, a trained data collector led in-person survey administration. Students completed the standard 2019 State and Local Youth Risk Behavior Survey 89-question YRBS paper and pencil questionnaire using a scannable answer sheet. In the fall, teachers were provided with step-by-step instructions to lead remote survey administration, as students were attending class through distance learning. Students completed the same 89-question web survey using a desktop or laptop computer, smartphone or tablet. In both spring and fall, students were informed participation was anonymous, voluntary and any questions could be skipped.

Survey processing

ICF, Macro (survey vendor) collect all completed surveys and prepared them for data analysis.

Survey Implementation Key facts

- Survey participation is confidential and anonymous
- Most surveys are completed within 30-40 minutes.
- Survey administration is scheduled to minimize disruption to the school.

RESPONSE RESULTS

School participation was voluntary and, because of COVID-19, lower than expected. However, student participation was high. Overall participation (percentage of schools x percentage of students) was 47%.

Given the unusual effect COVID-19 had during data collection and the lower than expected school response rate, ICF conducted additional analyses to examine potentials for school and student nonresponse bias. Nonresponse bias refers to the potential for systematic under-representation and consequent bias in survey estimates due to nonresponse. The findings were used to inform statistical adjustments to the response data (i.e., more robust nonresponse adjustments to the weights) to inform users about the representativeness of the data. Overall, the variability in the weights was small and the overall variances were also relatively small.

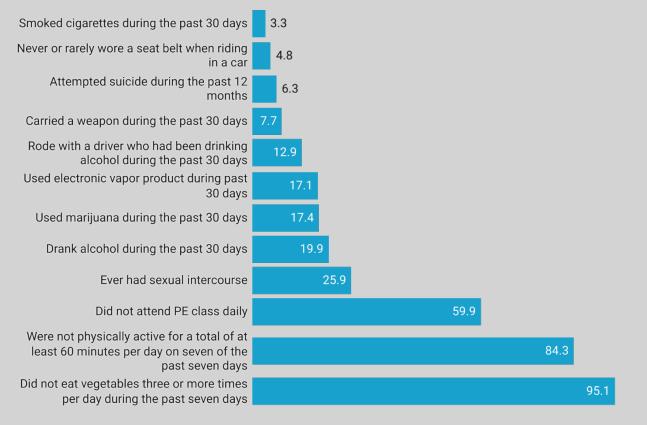

DISCUSSION

The goal of the 2020 SCC YRBS was to help describe youth risk behaviors and inform prevention efforts. The study was interrupted by the onset of the COVID-19 pandemic in March 2020. As a result of widespread school closure, half the data was collected in the spring, in-person, led by a trained data collector using a paper and pencil instrument; the other half was completed in the fall through distance learning, led by teachers via a web survey. Overall participation was 47%. A nonresponse analysis determined the data to be generalizable to the high school student population attending schools in Suburban Cook County.

2020 STUDENT BEHAVIOR: AT-A-GLANCE

The 2020 YRBS provided some insights to the student population in Suburban Cook County. This survey has given the most up-to-date estimates of the behaviors and risk factors for high schoolers. The following chart displays a quick summary of various youth risk behaviors obtained from the survey.

Percentage of students who:

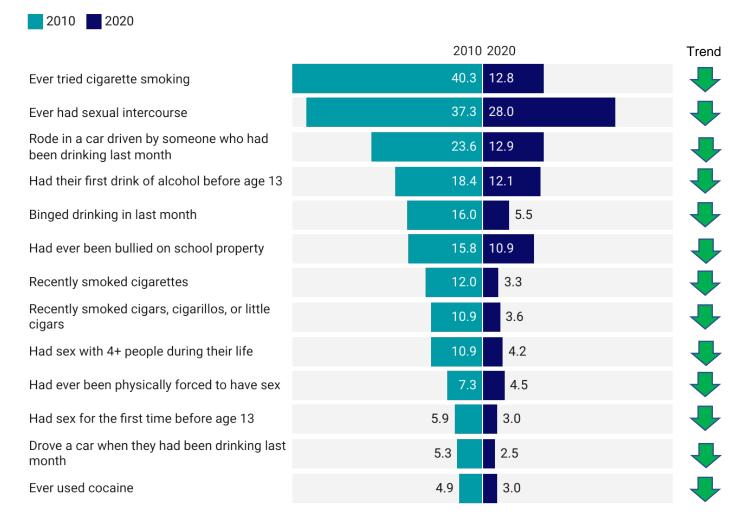

2010 to 2020 Comparisons

CCDPH had previously completed a version of the YRBS in SCC in 2010. Since then, there were some notable changes to the behaviors of SCC students. When comparing the 2010 survey to the 2020 survey, some differences were notable. This chart displays key risk behaviors that are improving in students from 2010 to 2020. Behaviors reflecting

improved health behaviors are indicated in green and red indicates poorer health behaviors, whereas the arrow reflects the direction of change from 2010 to 2020.

MOVING IN THE RIGHT DIRECTION Percentage of students who:

MOVING IN THE WRONG DIRECTION Percentage of students who:

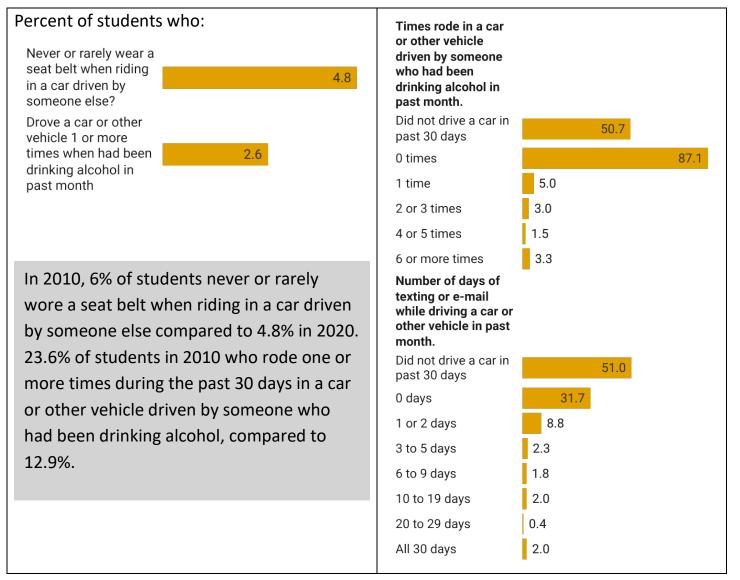

| | 2010 | 2020 | Trend |
|---|------|------|-------|
| Attended physical education (PE) class last week | 84.1 | 76.7 | - |
| Played on a sports teams during in last year | 62.1 | 51.6 | - |
| Physically active for an hour a day on 5 of past 7 days | 49.1 | 34.1 | ➡ |
| Played video/computer games for more than 3 hours on a school day | 29.1 | 53.7 | |
| Felt so sad or hopeless almost every day for two weeks | 26.9 | 32.3 | |
| Described themselves as slightly/very overweight | 26.8 | 34.8 | |
| Texted or e-mailed while driving a car last month | 26.2 | 49 | |
| Drank soda/pop last week | 23.7 | 66 | |
| Not physically active last week | 13.5 | 22.9 | |
| Felt unsafe at school and did not go | 4.3 | 32.3 | |

TOPIC: SAFETY CHARACTERISTICS

The leading cause of death for adolescents in the U.S. are injuries, which includes motor-vehicle crashes. Youth are at a high risk of nonfatal injuries that does include violence and self-harm. The following data shows the results from the survey as it relates to vehicles, violence, bullying, and self-harm.

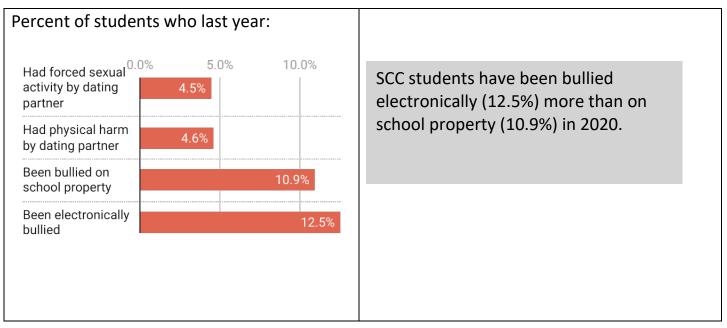

Vehicle

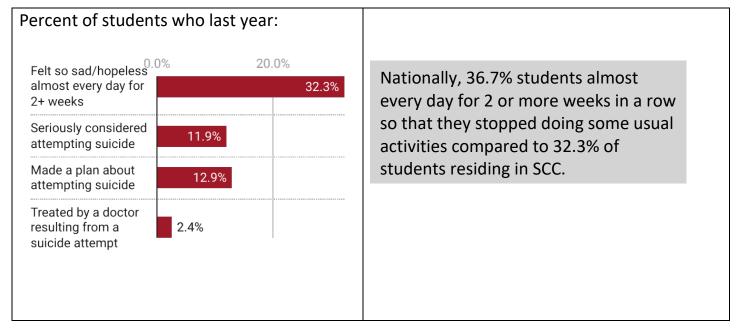

Violence

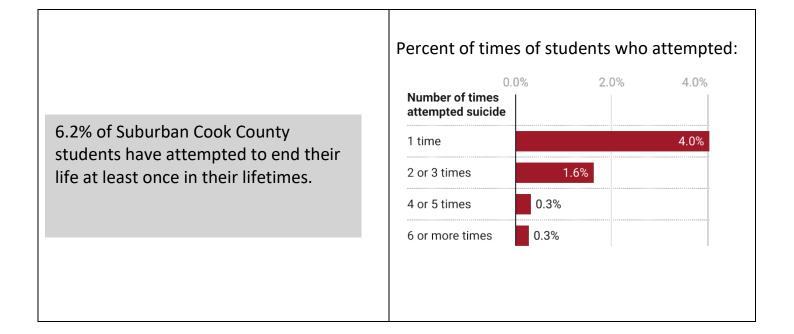

Bullying

Suicide-Related

TOPIC: SUBSTANCE USE

Substance use in adolescence is considered a high-risk behavior. The following data shows the results from the survey as it relates to tobacco, vaping, marijuana, and other substance use.

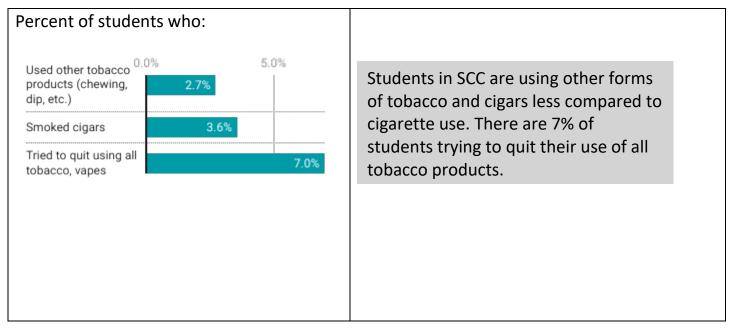

Cigarettes

| Percent of students who currently: | |
|--------------------------------------|---|
| 0.0% 2.0% Smoked cigarettes 3.3% | There are about half less SCC students |
| Number smoked per day | that are currently smoking (3.3%) compared to students who smoke |
| <1 cigarette per day 1.9% | nationally (6.0%). |
| 1+ cigarette per day 1.9% | |
| | 0.0% 2.0% Age of trying cigarette smoking |
| The age of initiation into cigarette | 8 years old or younger 2.1% |
| smoking for SCC students is mainly | 9 or 10 years old 1.0% |
| between 13 and 16 years old. | 11 or 12 years old 1.9% |
| | 13 or 14 years old 3.5% |

| Given from someone | 7.1% |
| Took it from a store or family member | 3.2% |
| Some other way | 3.1% |
| | |

Marijuana

Other Substances

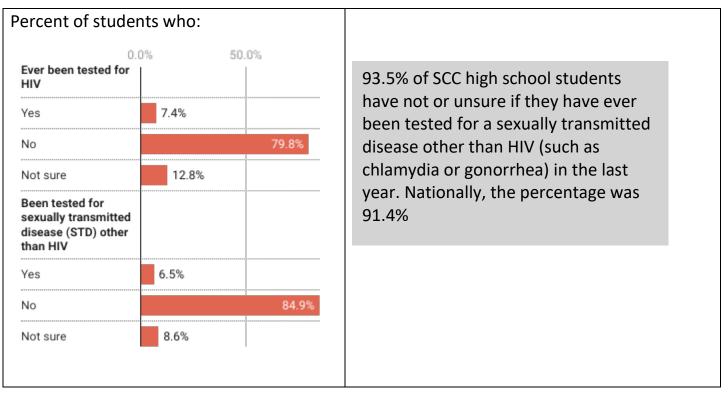

TOPIC: SEXUAL ACTIVITY

It is known that adolescents who engage in sexual risk behaviors have a greater likelihood of contracting HIV or STDs and of becoming pregnant. This section describes the current characteristics in SCC students.

| Percent of stude | | | |
|-----------------------------------|-------------------------|--|--|
| Ever had sexual intercourse | 6 10.0% 20.0% 28.0% | | |
| Number of sexual partners ever | | are sexually active, compared to 27% nationally. | |

| Females | | 19.7% | |
| Males | | 13.9% | |
| Females and males | 3.4% | | |

Sexually Transmitted Diseases

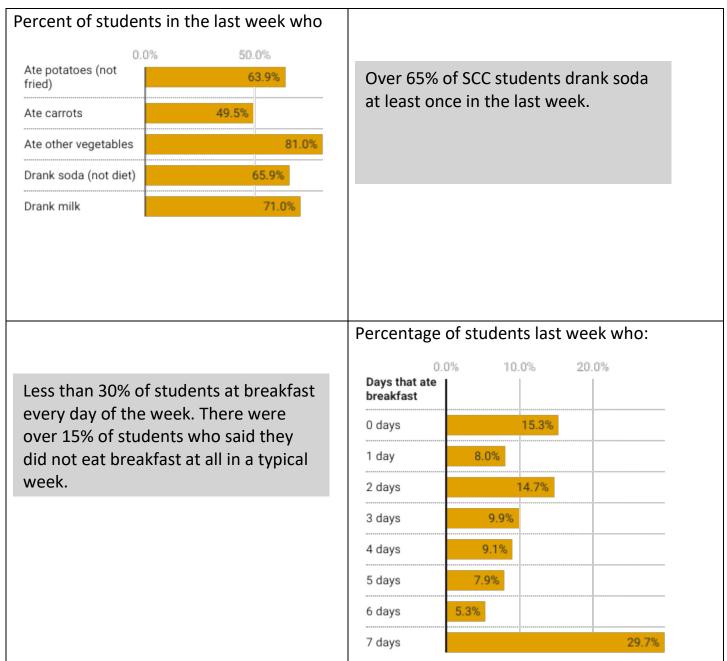

TOPIC: WEIGHT, EXERCISE & DIET

Understanding the dietary and physical activity patterns among adolescence is important to public health to preventing chronic diseases. The following sections analysis the characteristics of SCC bodyweight, healthy food intake, physical and leisure activity.

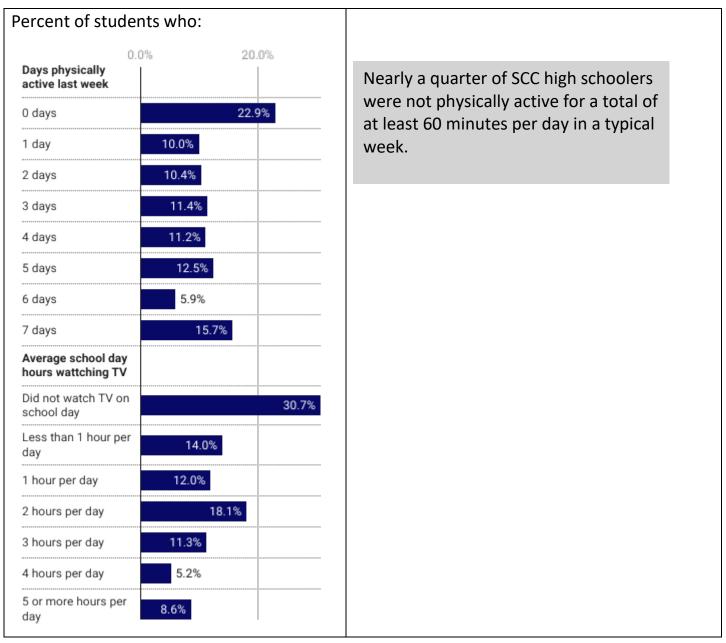

Bodyweight

| ercent of students | s who: | | |
|---|--------|-------|---|
| 0.0% | 20.0% | 40.0% | |
| Self described weight Very underweight | 4.5% | | Over 45% of all SCC high schoolers considers themselves to be about the |
| Slightly underweight | 15.3% | | right weight, yet nearly half of all students wanted to lose weight. |
| About the right weight | | 45.5% | |
| Slightly overweight | 29.5% | | |
| Very overweight | 5.3% | | |
| Self described goals | | | |
| Lose weight | | 48.4% | |
| Gain weight | 20.6% | | |
| Stay the same weight | 14.7% | | |
| None | 16.4% | | |

Healthy Food Intake

Physical Activity and Leisure

Even though students are not watching much TV, they are playing video and computer games. Over 25% of high schoolers are playing 5 or more hours of games on an average school day.

| Average school day ^{[].} hours playing videogames | 0% | 20.0% | 40.0% |
|---|-------|-------------|-------|
| Did not play video games | 16.1% | | |
| <1 hour per day | 9.7% | | |
| 1 hour per day | 7.6% | | |
| 2 hours per day | 13.0% | | |
| 3 hours per day | 16.8% | | |
| 4 hours per day | 10.1% | | |
| 5 or more hours per day | | 26.8% | |
| Days of physical education classes in week | | | |
